## SKILLS

### JavaScript

ES6, Promises and Callbacks, DOM manipulation, Event Handling

### C++

Data Structures , Competitive Codiing

### Firebase Api

Real Time Database, Authentication

### Redux

Redux Tool kit, React Redux

### VS Code

## INTEREST

I enjoy playing and watching football, as well as analyzing the depth of matches.

Hiking/Outdoor Activities

### React

Hooks,Routers, Context API,Events

### Python

Competitive Coding

### React Router

Link,NavLink, Navigate, Provider

### Github

Repositories, Commits, Branches

Like to do Competitive Coding

I am a versatile web developer with expertise in frontend development and proficiency in Firebase for backend tasks. Skilled in crafting visually appealing projects, I excel in full-stack development, creating seamless and dynamic web applications. My Github showcases a range of captivating projects demonstrating my proficiency and creativity.

## EDUCATION

### Bipin Tripathi Kumaun Institute of Technology

(July 14, 2019 - June 19, 2023)

B Tech, Electronics and Communication Engineering

Web Developement Training in Intershala in 2020, React Course in Coursera in 2022

## COLLEGE ACHIEVEMENT

### BTKIT

Head Of Non-IT coding team

Led the Non-IT Student Coding Team at my university, organizing coding fests and workshops to introduce coding concepts.

Created opportunities for diverse students to explore tech interests and develop coding skills, fostering a culture of innovation and collaboration.

## PROJECTS

### MailBox App

A MailBox App having all the functionalities of gmail

Created a user-friendly interface using React, focusing on seamless navigation and interactive components. Implemented Redux for state management, ensuring efficient data flow and centralized state management throughout the application. Leveraged JavaScript to add dynamic functionalities, enhancing the overall user experience. Integrated Firebase for real-time data storage and retrieval, enabling features like authentication and database management.

 <https://github.com/SanOP360/mymailboxapp>

### Expense Tracker

Get updated with your daily expenses using this app

Developed an expense tracker web application using React and Redux for frontend state management, Firebase Authentication for user authentication, and Firebase Realtime Database for storing and retrieving expense data. The application allows users to track their expenses, categorize transactions, and update their profile information securely and we can also download our expense data. Dark mode feature is also available in a theme

 <https://github.com/SanOP360/ExpenseTrackerApp>

### Ecommerce App

A Great Ecommerce Application for the musicians to buy music Appliances and can also book tickets for the concerts here.

Utilized React to create reusable components, improving code maintainability and scalability. Implemented useContext hook for global state management, enabling seamless data sharing between components. Integrated Firebase Authentication for secure user registration, authentication, and session management.

### Restuarant App

An interesting app to order food

Designed and developed a restaurant ordering web application using React and useContext hooks for state management. The application enables users to browse a menu, select items to order, customize their orders, and proceed with payment
